#### **Overview**

- Refinery Schwechat
- OMS Overview
- Disposition of Movements
- Order Generation
- Monitoring of Movements & Stocks
- Tracking of Quality information
- System architecture
- Development of OMS

LIA AS FA HE PM

#### **Overview**

#### Main functions

- Disposition & Execution of movements
- Monitoring of movements& volumes
- Accounting
- Blending (support of online blending)

#### Goals

- Order Management QM
- basis for decisions of the Disposition department
- Accounting of Stock and Movements with high precision (balance difference < 5%)</li>
- On Spec Products
  - strict observance of all quality parameters
  - avoid blend corrections

# OMS Overview Planning -> Disposition -> Execution -> Reporting

#### **Overview OMV Tankfarm, Units & Blending**

- Tankfarm Capacity Raffinery Schwechat (& Lobau)
  - ~3.000.000 m<sup>3</sup>
  - Number of Tanks: ~200
- Production Units in the system:~25
- Product inline Blender
  - Online Quality analysers
  - Steady State & Dynamic Optimization
  - Number of Blenders: 4
    - 1 Diesel (MD), 1 Gasoline (OK), 2 Fuel Oil (HL, HS)
  - Max. flow rate (MD) 1400 m3/h
- Movements
  - ~300 daily
    - Unit input & -output, Raffinery entries & -exits (Sale), Tank to Tank pumpings

## **OMS Overview Units-, Tank- Product / Movement**

# **Order Management**

- Based on the funcinality, the following order types are implemented:
- Crude oil pipline orders (including batch definition, automated batch switching and flush management)
- Entry orders all orders where material (crude oil) will be delivered from the outside to the refinery
- Exit orders all orders where material (intermediate or finished product) will be delivered from the refinery to the outside
- Unit orders oders for unit planning

LIA AS FA HE PM

Tank orders – defines tank to tank movements

# Entry order – crude oil pipeline

#### **Exit orders**

#### **Unit orders**

# **Plant/Unit planning**

**Industry Sector** 

#### **Tank orders**

# **Blending**

- OMS tracks, calculates and manages all data to support the inline blending
  - the qualitites of the component tanks
  - The qualities of the finished product tanks
  - The qualities during the production cycle
- OMS interfaces the blend oprimizers (calculation of start recipy and optimization of the working recipy)
- If the whole production will follow specific quality reglements, the delivery of finished product out of the production tank is permitted (In-, Out-production)

#### **Blend Order**

# **Finished Product Quality Tracking**

# **Optimizer interface**

#### **Execution and overviews**

OMS offers a lot of screens to represent the planned movements and orders to the operators:

- Working plan
- Unit overview
- Pipeline overview
- Tank details

# Working plan

Page 19 I IA AS FA HE PM **Industry Sector** 

# **Disposition of Movements Example: Planning for Pipeline West**

Page 20 LIA AS FA HE PM **Industry Sector** 

# Movement planning Example: Unit order

Page 21 I IA AS FA HE PM Industry Sector

#### Tank details

#### **Monitoring of Movements & Stocks - Volume Tracking**

- Stock
  - Level Indicators (LI)
  - Strapping Tables
  - Calculation formulas (Sphere, Cylinder)
  - Interpolation (Lookup Tables)
- OMS calculates Volume
  - min. 30', & at every Start or Stop of a movement
  - Volume at working conditions
    - Temperature
    - Pressure (Gas)
  - Volume at standardized conditions
    - Liquids (15°C)
    - Gases (0°C, 1,013 bar)
- Conversion via ASTM Formulas

# **Monitoring of Movements & Stocks - Quantities**

Quantity of movements

# Tracking of Qualities – Support for Blendoptimizing

# **Tracking of Compositions**

The Composition – Tracking tracks the crude oil compositions for the crude oil tanks as well as the intermediate product tanks after physical intersection (destillery,...)

Based on crude oil analysis tables (syntop-table)

- Yields
- Main qualities (density, heavi metals, etc)

Tracking into intermediate product tanks using yield information "Software Analyzer"

- based on the composition table and the qualities per crude oil, an output quality can be calculated
- This calculated quality is accurate enough, that the working points of the catalytics for Visbreaker and Fluid Catalytic Cracker can be optimized

# **Compositions**

Page 28 I IA AS FA HE PM Industry Sector

# **Accounting**

OMS tracks all movements in the refinery, accounts the volumes and masses and prepares the following informations:

- Volume, Volume at 15°C, mass
- Accounting per movement (start, stop, every 15min, end of day)
- Accounting of all movements at 0:00
- Accounting of tank inventory at 0:00

LIA AS FA HE PM

# **Accounting – Movements and Tanks**

# **Accounting - Meters**

# Configuration

- The system has a very flexible design
- The design is object oriented
- The system is open to changes by the customer

# **System Monitoring**

 The system uses centralized interfaces for the main functionalities. These interfaces will be automatically monitored bay the system. If any fault (or low performance) will be detected automatic messages will be sent via SMS

Industry Sector

#### **Systemarchitecture OMS & Blending Systems**

#### **Development of OMS**

#### **2002-2003**

- Development of OMS
  - OMV, ETM
- Duration: 2 Years
- "State of the Art" System
- Very flexibile for changes
- High Availability of the System

#### **2003 - 2005**

- Enhancements of OMS
- Integration of production units
- Unit monitoring and balance

#### **2006 – 2008**

Development of OMS as product solution based on pure PVSS functionalities

#### **2009**

Start of implementation of ASTM/API D1250-07 calculations
