

## S7-1500 IEC 定时器和 S7 定时器启动后是否受扫描周期的影响

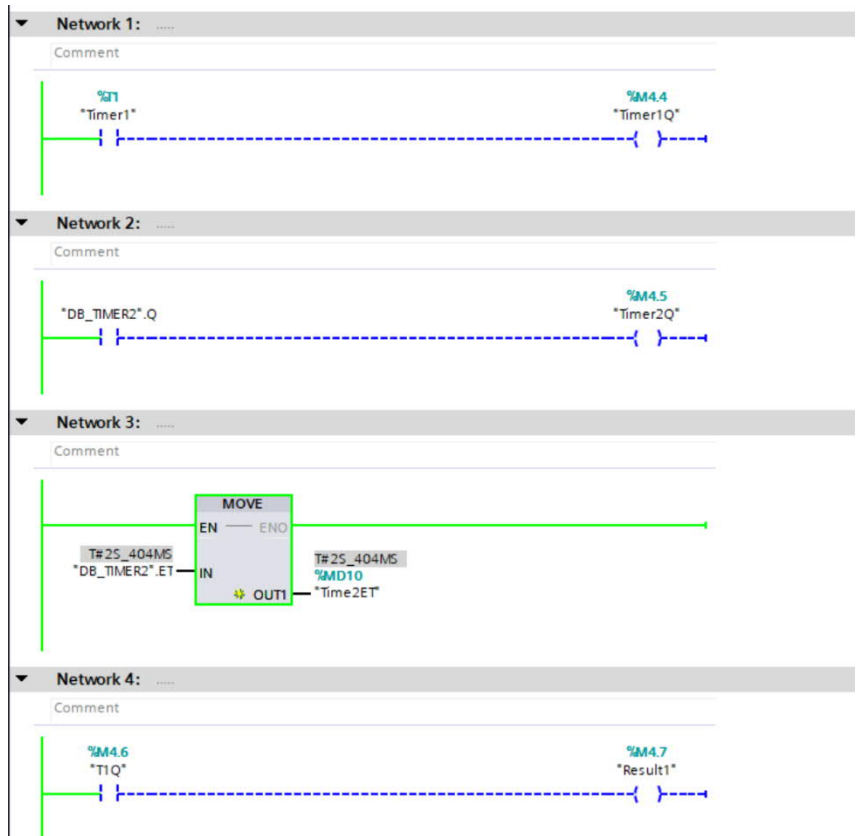

1. OB30 循环时间为 1min，定时时间为 10s

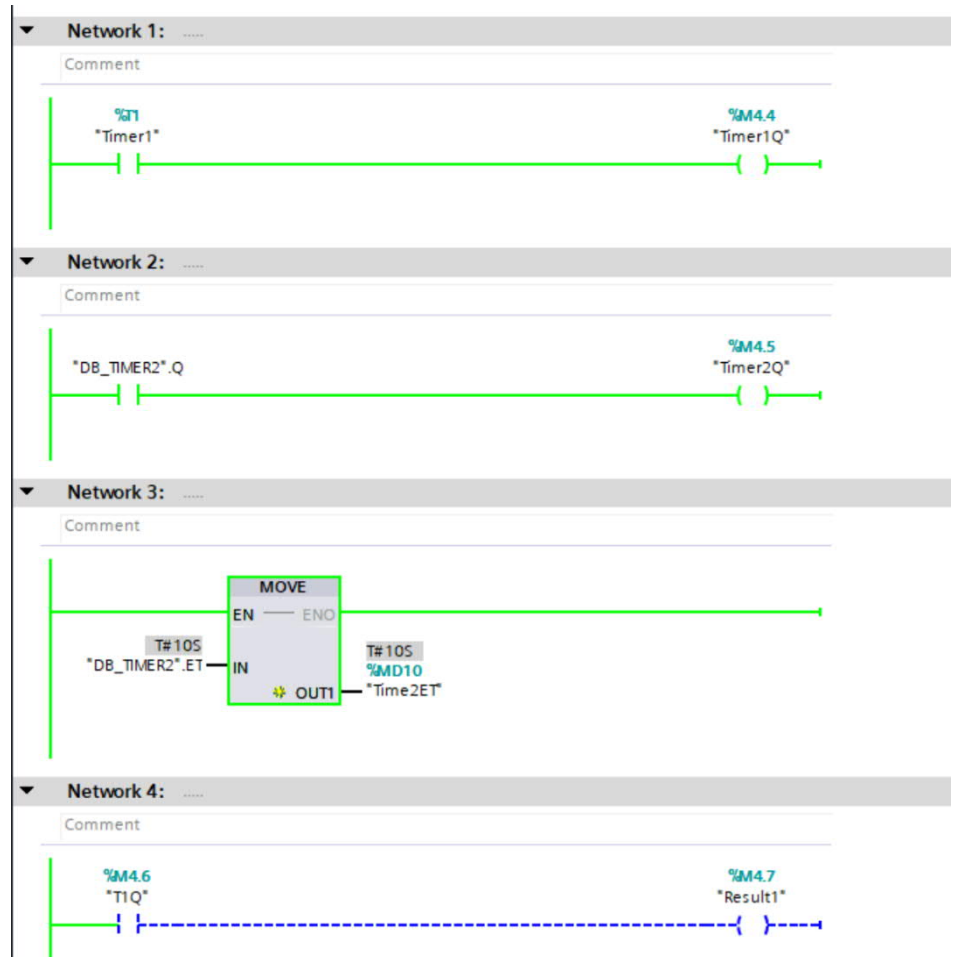

2. OB1 中的 程序如下

3.使能"TimerStart" 信号， 能看到 2 个定时器都开始计时

4.到达 10s， 能看到 2 个定时器都有输出， 但" T1Q"变量由于在 OB30 中所谓定时器的输出线圈， 受 OB30 执行周期的影响， 并未置位

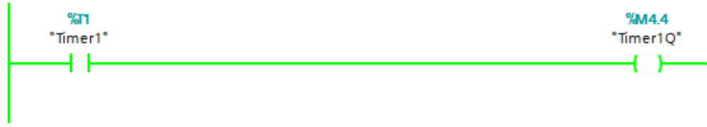

5. 经过 1min 第二次进入到 OB30 后才使能位"T1Q"
