

Automated Precision Weighing

Siemens and METTLER TOLEDO confirm that the precision weighing sensors of the METTLER TOLEDO Modulo WM and WMH family can easily and directly be connected with the Siemens SIWAREX FTA weighing electronics. The combination of the Modulo weighing sensors with their magnetic force restoration technology together with the high resolution SIWAREX FTA weighing electronics form a unique high-end weighing solution fully compatible to the Siemens concept "Totally Integrated Automation".

Any combination between these certified products meets the requirements for a proper functionality if the installation was made according to the installation instructions of the products. Compatibility is provided with software version 2.2 of the Modulo sensors and version 2.1.5 of the SIWAREX FTA electronics (or higher versions). For further information we refer to the respective documentation and to the standard warranty policy.
