BRUSHLESS RESOLVERS

MEET YOUR NEEDS IN MOTION CONTROL APPLICATIONS

Wide Range of Built-in types
for Direct Mounting onto Motors

Smartsyn, and brushless resolvers, are to offer you highly enhanced reliability which has been enabled by excluding human-dependent works in the major production / inspection procedures from parts processing, assembling to shipping.

We'd like to offer the resolvers for such applications as follows.

- Commutation of brushless motors
- Feedback sensor of servo systems
- Robots
- Machine tools
- Aerospace servo systems
- Others where harsh environmental condition is involved

Smartsyn is a name of our brushless resolvers of a new type. They have their inherent characteristics as a resolver : maintenance-free brushless design, immunity to noise, vibration, shock, and high temperature.

And now they have more to offer : homogeneity in the ever-variable parameters like accuracy, transformation ratio, phase shift, etc., which has been realized by highly automated production. Now this new quality can be taken for granted.

FEATURES

- Wide Operating Temperature Range
 - 55 to +155°C (Built-in type)
 - 30 to +100°C (All Shaft types, TS2028, and TS2054)
- Usable in Demanding Environments
 - Vibration : 196m/s² (20G) at 10~500Hz
 - Shock : 981m/s² (100G) for 11ms
 - Humidity : 90% Rh Min. at 60°C
- High reliability and long life owing to brushlessness
- Operating speed up to :
 - 100~500⁻¹ (6000~30000min⁻¹) / (Built-in type)
 - 100s⁻¹ (6000min⁻¹) / (Shaft type)
- Free from electrical and mechanical noise

MOUNTING REQUIREMENTS

The following mounting requirements should be kept to satisfy the specifications.

- Shaft Run-out

A motor shaft on which Rotor is mounted should have a run-out less than 0.050mm (TIR).

- Concentricity

Centers of resolver and motor shaft should be aligned within 0.050mm (TIR).

- Perpendicularity

Resolver case should be perpendicular to the motor shaft within 0.050mm (TIR).

- Axial Alignment

For built-in types, Stator and Rotor should be axially aligned within the tolerance of MTG.DIM.

PRINCIPLE

Resolver is a rotary transformer, which outputs AC voltage in accordance with angular position of the shaft. There are two types of resolvers, BRX and BRT, having different types of winding.

BRX resolver is excited by AC voltage to the rotor winding, and outputs from the stator windings sine and cosine voltages proportion to the rotation angle θ .

BRT resolver is excited by sine and cosine voltages to the stator windings, and outputs from the rotor winding a sine voltage phase-shifted in proportion to θ .

The difference is illustrated as follows.

BRX

Excitation : $E_{R1-R2} = E \sin \omega t$

Output : $E_{S1-S3} = K E_{R1-R2} \cos \theta$

$E_{S2-S4} = K E_{R1-R2} \sin \theta$ (Normal Type)

$E_{S2-S4} = -K E_{R1-R2} \sin \theta$ (Reverse Type)

K : Transformation Ratio

BRT

Excitation : $E_{S1-S3} = E \sin \omega t$

$E_{S2-S4} = E \cos \omega t$

Output : $E_{R1-R2} = K E_{S1-S3} \cos \theta - K E_{S2-S4} \sin \theta$
 $= K E \sin (\omega t - \theta)$ (Normal Type)

$E_{R1-R2} = K E_{S1-S3} \cos \theta + K E_{S2-S4} \sin \theta$
 $= K E \sin (\omega t + \theta)$ (Reverse Type)

K : Transformation Ratio

+ θ :CCW is positive when viewed from mouting end.

TS2651N111E78 : WITH TUBE

APPLICATION NOTES

- The supply voltage is a rated value, and a resolver can accept a voltage from 3V to approx. 1.2 times as high as the rating. However, the supply frequency should only be altered within $\pm 5\%$ lest it should affect the accuracy. Electrical parameters largely vary as the frequency varies as shown on the right.
- When a noise source is in vicinity, or when signal transfer distance is long, twisted/shielded pair cables should be used. When a noise still exists on the signals, they should be received by a differential amplifier.
- In BRX resolver, the two output voltages should be connected to the same amount of loads each other, or the voltages will get disproportionate, thus affect the accuracy.
- When an intense magnetic field surrounds a resolver, it may not work properly with its magnetic flux affected.
- When a resolver is used in a high humidity as close to 100% Rh for a long time, waterproof structure should be considered lest its insulation materials should deteriorate.
- All resolvers in the catalog are $1 \times (2 \text{ poles})$ resolvers. For winding modifications to other speeds, please consult us.

APPLICATIONS

- For Driving Robot Hand and Body.

- Applicable to the roller positioning control of rolling mills.

- Smartsyn resolvers which are reliable at high speed are suitable for numerical control systems.

WARRANTY

Tamagawa Seiki warrants that this product is free from defects in material or workmanship under normal use and service for a period of one year from the date of shipment from its factory. This warranty, however, excludes incidental and consequential damages caused by careless use of the product by the user. Even after the warranty period, Tamagawa Seiki offers repair service, with charge, in order to maintain the quality of the product. The MTBF (mean time between failures) of our product is quite long; yet, the predictable failure rate is not zero. The user is advised, therefore, that multiple safety means be incorporated in your system or product so as to prevent any consequential troubles resulting from the failure of our product.

All specifications are subject to change without notice.
